Cloud Migration Service Maintaining data integrity and business continuity

Adoption of Microsoft 365, Google G Suite and other cloud applications and services continue to accelerate. The Covid-19 pandemic has created an incredible spike in cloud adoption as organisations seek flexibility and business continuity in their operations.

At AdEPT, the rate at which we support organisations in their IT transformation, has been growing year on year by more than 50%.

Your “journey to cloud” will take in many steps, questions marks and potential directions. At AdEPT our Cloud Readiness Assessments can help you map out where you are today and the feasibility of moving some, or all, of your IT services and business processes into a modern cloud environment.

Your starting point may be different – you may be taking your very first steps into the cloud, effectively starting from scratch; or you may be well into your journey and looking to take additional services off premises.

For many organisations, when they move applications to the cloud, the real concern is how to migrate without losing the integrity of the data and existing definitions and policies that are in place to support business operations. How to maintain business continuity through the journey to cloud is a critical part of the decision process.

One of the cloud migration tools available to you from AdEPT has specific strength in the migration of user profiles, emails, documents and policies to Microsoft 365 and Google G Suite environments. A robust and reliable migration is an important part of any cloud adoption service we offer to our customers.

Hosted in the AdEPT Nebula environment – our own private cloud – our cloud migration tool provides guaranteed data integrity and zero downtime. This enables a completely smooth transition to Microsoft 365 and Google G Suite.

As a Microsoft Gold Network Partner and Authorised Education Partner, and a Google Cloud Partner, AdEPT are well-placed to advise and support you on your journey to cloud.

The technology we use has performed over 40 million migrations, in over 80 countries, transferring over 11 petabytes.

The AdEPT Migration Service delivers everything you expect from an enterprise grade cloud migration package. Our cloud migration service is designed for any size migration, no matter how complex. We aim to reduce cost, avoid unnecessary disruption and mitigate risk.

Features

Simple to Use

Enjoy a straightforward and user-friendly experience, with a choice of desktop and browser-based interfaces.

Security

Our processes can guarantee data integrity and zero downtime throughout the migration.

Managed Service

Our experts can manage the entire migration process for you, with detailed analysis and reporting along the way.

Uniting technology,
inspiring people
